CASE FILE

3D Portfolio

This site: a 3D studio room whose monitor runs live demos of other projects.

PROBLEM

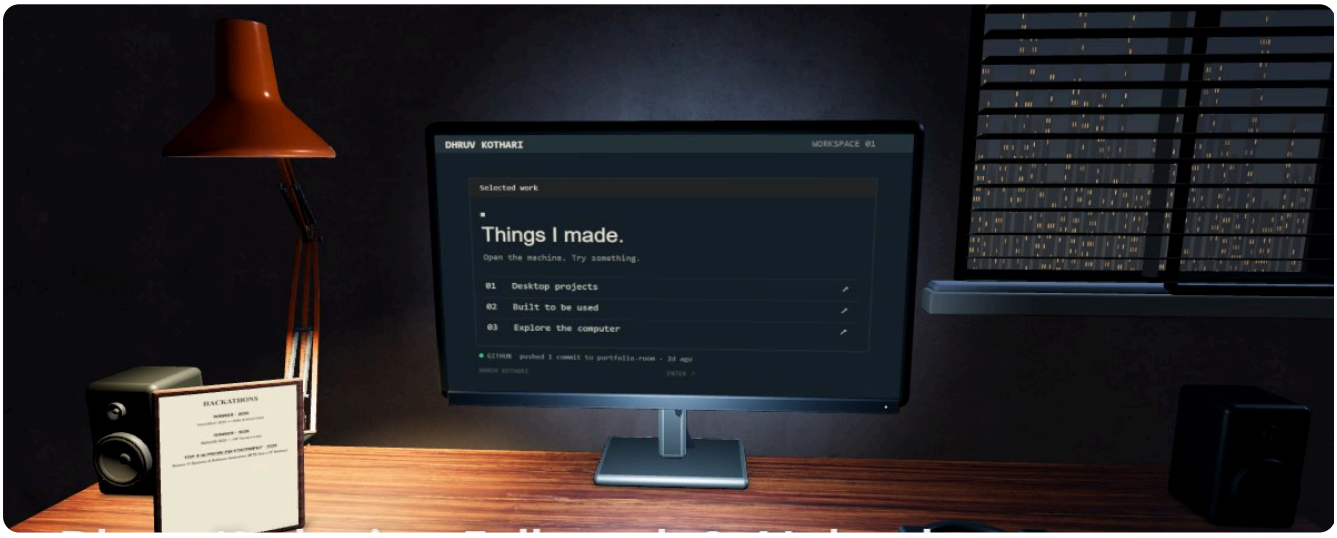

A 3D portfolio is slow or unusable on weak GPUs, phones and browsers without WebGL.

DECISIONS

The site detects each visitor's GPU and serves a 3D, mobile or no-WebGL version. The studio room's monitor runs live demos of other projects, and Playwright checks cover the interactions.

RESULT

Holds 30 to 60 FPS on integrated graphics; the same content is reachable on every tier, including the plain work page.

Three.js · React 19 · GSAP · GLSL · Playwright
